Natan Ruden Loterio

CTO @ pitaia.me | Senior Android Engineer (Kotlin) | LLM & Agent Systems | ex Tech Lead @ HUGO BOSS, Farfetch
Lisbon, Lisbon, Portugal

Summary

Currently building something new.

Background in leading engineering teams and shipping scalable products in complex environments.

Previously Tech Lead at HUGO BOSS.

Experience

Pitaia.me

CTO

February 2026 - Present (7 months)

Lisbon, Portugal

Built the first AI-native platform for running an online business solo, where an autonomous agent (not a dashboard) is the product: it sells, answers customers, closes checkout and handles the admin work that used to take five separate tools. Took it from a blank repo to live stores and paying customers in under six months. Delivered a 26-tool MCP layer that exposes the whole product to LLMs, making Pitaia one of the first commerce platforms fully operable by an agent. Shipped the first Instagram DM agent in the Brazilian creator market that sells end to end, from conversation to Pix or installment payment via Mercado Pago, without the customer ever leaving the DM.

HUGO BOSS

Tech Lead

March 2025 - February 2026 (1 year)

Lisbon, Portugal

Tech Lead, Global Android Apps - March 2025 - February 2026

Led the global Android apps for the BOSS and HUGO brands, live in 15 countries and 8 languages with 500k+ installs and a 4.5-star rating on Google Play. Took the project over from the external agency that had built it, brought development in house and built the internal Android team from scratch.

Defined the workflows, coding conventions, architecture patterns and way of working, which management adopted across the whole mobile organization. Drove the modernization of the codebase to current engineering standards so an app carrying e-commerce, click-and-collect, in-store appointments and the HUGO BOSS XP loyalty program could scale reliably with the business

GaiaHub.ia

LLM Engineer

January 2022 - January 2026 (4 years 1 month)

Lisbon

Founded and led GaiaHub, an innovative low-code platform for building and deploying Language Model (LLM) applications. Architected a comprehensive ecosystem that enables developers to create sophisticated AI-powered solutions through an intuitive drag-and-drop interface, eliminating barriers to LLM app development. Directed a multi-repository infrastructure spanning the core platform (TypeScript-based), web packages, CLI tools, API references, and documentation. Established technical governance across the GaiaHub organization while building community-driven features and ensuring scalable, production-ready deployments. Integrated advanced AI/ML capabilities with modern web technologies to democratize LLM application development, positioning GaiaHub as an accessible platform for both developers and non-technical users to harness the power of large language models.

FARFETCH

Android Engineer

August 2021 - April 2025 (3 years 9 months)

Lisbon, Lisbon, Portugal

In my role as an Android Engineer at FARFETCH, I focused on developing and maintaining eCommerce mobile applications, with a strong emphasis on modernization and performance optimization.

Spearheaded the transition to Jetpack Compose, streamlining the UI development process and significantly enhancing the user experience. Modernized the application architecture, transitioning from traditional MVC and MVVM patterns to more efficient solutions, which improved code maintainability and scalability.

Optimized the CI/CD pipeline, leading to reduced deployment times and increased efficiency in the development process, ultimately lowering operational costs.

Key Achievements:

Reduced the pipeline building time from 15 minutes to 2,5 on average.
Spearheaded the adoption of inversion of control via dependency injection.
Spearheaded the adoption of Jetpack Compose

Brelo

Android Developer

May 2020 - August 2021 (1 year 4 months)

Florianopolis, Santa Catarina, Brazil

In my role as an Android Developer at Brelo, I spearheaded the development of Android applications utilizing technologies such as Sqlite and GPS.

- Implemented Augmented Reality features with Aruco markers for an immersive user experience.
- Leveraged Java and Kotlin to optimize app performance and user interface design.

Facio

Android developer

September 2019 - May 2020 (9 months)

São paulo, Brazil

In my role as an Android developer at Facio in São Paulo, Brazil, I led the architecture and development of applications in Flutter for Facio Fintech.

- Developed responsive screens and integrated RESTFUL APIs for seamless user experience.
- Managed app states using redux and bloc to ensure clean and maintainable code.
- Provided the best version of the app possible to enhance user satisfaction.

Cecred Central Credit Union

Architecture analyst

April 2018 - July 2019 (1 year 4 months)

Blumenau Area, Brazil

In my role as an Architecture Analyst at Cecred Central Credit Union, I led the management of corporate innovation programs, facilitated training sessions, and developed internal innovation initiatives. Through my strategic approach, I was able to help the company save up to 5 million Brazilian reais,

demonstrating my ability to drive efficiency and foster innovation within the organization.

- Worked on the development of internal innovation programs
- Facilitated corporate training sessions
- Played a key role in saving up to 5 million Brazilian reais

HBSIS

Senior Android Developer

February 2017 - April 2018 (1 year 3 months)

Blumenau Area, Brazil

In my role as a Senior Android Developer at HBSIS, I spearheaded the development and maintenance of Android applications for tracking and delivery of Ambev products.

- Leveraged technologies such as Sqlite, GPS, and Storage to optimize product tracking and delivery processes.
- Implemented design patterns like MVC and MVVM to ensure clean and maintainable codebase.
- Successfully integrated features like auto-routing and geofencing for efficient product delivery.

ATAR

Senior Android Developer

January 2016 - September 2016 (9 months)

Timbó, Santa Catarina

In my role as a Senior Android Developer at ATAR, I spearheaded the architecture, development, and maintenance of Android applications for the Fintech sector in Timbó, Santa Catarina. Leveraging technologies like Sqlite, GPS, NFC, and Camera, I implemented design patterns such as MVP and MVC to ensure efficient and user-friendly applications.

- Developed and maintained Android applications for the Fintech industry
- Utilized technologies like Sqlite, GPS, NFC, and Camera
- Implemented design patterns such as MVP and MVC

Morphy Digital Group

Senior Android Developer

November 2014 - January 2016 (1 year 3 months)

Blumenau, Brazil

Spearheaded the development and maintenance of Android applications for SalesForce at Morphy Digital Group, resulting in enhanced user experience and increased efficiency.

- Implemented design patterns like MVP and MVC to optimize app performance.
- Utilized technologies such as Sqlite, GPS, and Sockets for seamless functionality.

Microton Tecnologia

Android Developer

2012 - November 2014 (2 years)

Blumenau e Região, Brasil

As an Android Developer at Microton Tecnologia, I developed and maintained android applications for Sales Force, utilizing Java, XML, and SQL. I also implemented design patterns like MVP for efficient code structure.

- Created a library to facilitate communication between a bluetooth printer and an Android device.
- Utilized technologies such as Sqlite, GPS, and Sockets to enhance app functionality.

LMA Soluções

Programador Delphi

August 2011 - November 2011 (4 months)

Desenvolvimento e manutenção de soluções ERP

Microcel Soluções

Delphi Developer

January 2008 - December 2009 (2 years)

Desenvolvimento e manutenção de soluções ERP

Education

FURB - Universidade de Blumenau

Bacharelado em Ciência da Computação, Ciência da Computação · (2007 - 2010)

Fundação Universidade Regional de Blumenau
